The No.1 Instant Calmer

equine
oxyshot[®]

Why OxyShot?

Equine Oxyshot helps horses instantly with stressful situations such as clipping, shoeing, travel, competition, farrier or dentist visits, hacking, schooling and riding in new surroundings.

Even a small decrease in oxygen levels can cause a change in behaviour. Equine Oxyshot works by assisting oxygen levels using natural ingredients. Under stress the bodies demand for oxygen increases and before competition this is magnified further as the body sends vital supplies to the working muscles.

OXYGEN MAGNESIUM

Don't waste your money, OxyShot was voted most effective and fastest instant calmer available!

"I use Oxyshot before travelling, clipping and shoeing. I also give a shot before schooling and competition for calmness and better concentration. I have tried magnesium and herbal calmers but these take too long to work if at all. Oxyshot is fast acting and very effective! It makes my horse more co-operative and willing to work, we even have better scores when competing!"

Jenny Thomas - Novice horse rider.

Used professionally &
proudly recommended in all disciplines by:

Matt Ryan OEM - Triple Olympic Gold Medalist
Ben Maher - Olympic Showjumping
Richard Ramsay - International Showing
Dan Sherriff - International Dressage
Julie Tew - International Eventer
