

StemVet science

Veterinary Use Only

For Small Animals (6 x 2ml)

Presentation

A sterile clear liquid in an amber glass vial. Each of the 6 vials contains 2ml of Ovine Placental Fractionated Protein Extract – 10% w/v in water.

Indications

StemVet science is indicated as a protein supplement. It is applied intravenously, and is for veterinary use in small animals only.

Dosage

Each vial (2ml of StemVet science) is intended for one-time use only. No more than one vial should be used on an animal over a period of 6-8 weeks.

Administration

Bolus intravenous injection must be given by an experienced veterinary practitioner.

Warning

Do not use if the security seal is broken or missing. Do not use after the expiration date on the vial. Used vials do not contain any toxic products and can be disposed of safely.

Storage

Unopened vials should be stored in a refrigerator at 4°C. Do not freeze. Do not expose to sunlight. Keep out of reach of children.

Adverse Events & Contra-indications

StemVet science and this product does not swab after a period of 3 days. Adverse effect of overdosage has not been tested.

In case of reddening and swelling at the injection site, cold compresses and repeated, gentle application of a heparin ointment (healing cream) should be sufficient. An increase in temperature might occur for a brief period. The risk of abscesses is small. In extremely rare cases of allergic reactions, the therapy recommended by the international committee should be administered.

Mechanism of Action

StemVet science works by activating the animal's inherent stem cells in vivo. StemVet science is entirely natural and is a unique fractionated protein extract from the placenta of ovine origin, otherwise called Placental fractionated protein extract or PFPE.

PFPE is a rich source of nutrients and contains a variety of growth factors and signaling molecules.

When injected intravenously StemVet science is distributed systemically and subsequently activates the animal's inherent stem cells in vivo.

This produces a regenerative effect and a resulting improvement in the overall health and well-being of the animal.
